

## PERSONAL INFORMATION

**Full Name:** Wanyangu Flavius Muruka

**Phone:** 0757 293 758

**Email:** wanyanguflavius@gmail.com

**GitHub:** <https://github.com/Dr-Noir254>

---

## CAREER OBJECTIVE

A motivated Mathematics and Computer Science student seeking an industrial attachment opportunity to apply and strengthen skills in data analysis, programming, and database systems. Interested in using data-driven approaches to solve real-world problems in logistics, transport, and operations.

---

## EDUCATION

**St. Peter's Mumias Boys High School**

KCSE – B+

**Current:** Bachelor's Degree in Mathematics and Computer Science

Jomo Kenyatta University of Agriculture and Technology (JKUAT)

---

## TECHNICAL SKILLS

- Python (Data Analysis, Scripting)
  - MySQL (Database design & queries)
  - HTML & CSS (Basic web development)
  - Git & GitHub (Version control)
  - Data analysis using Pandas & Matplotlib
- 

## PROJECT EXPERIENCE

### Road Safety Incident Analysis System

- Designed and implemented a relational database using MySQL to store road traffic incident data
- Connected Python to MySQL to retrieve and analyse structured datasets
- Performed data analysis using Pandas to identify patterns in accidents

- Visualised insights using Matplotlib (causes, severity distribution, and county-based analysis)
- Identified high-risk counties and common accident causes such as speeding.

**Tools used:** Python, MySQL, Pandas, Matplotlib, GitHub

## Student Spending Analysis Project

- Analysed student financial data using Python to understand spending patterns
- Used Pandas for data cleaning, aggregation, and statistical summary
- Visualised spending distribution across categories such as food, transport, entertainment, and savings
- Generated insights showing how income relates to savings behaviour among students
- Developed basic data storytelling skills through graphical representation of results

**Tools used:** Python, Pandas, Matplotlib

## VOLUNTEERING / LEADERSHIP

- Collaborated with peers in academic and project-based environments
- Assisted classmates in understanding basic programming and data concepts
- Participated in team-based problem-solving during technical projects  
*(You don't need formal jobs—this is enough for now)*

## INTERESTS

- Data Analytics
- Transport & Logistics Systems
- Software Development
- Problem Solving using Data
